Java

```java
class Solution {
    public int numberOfCleanRooms(int[][] room) {

    }
}
```

JavaScript

```javascript
/**
 * @param {number[][]} room
 * @return {number}
 */
var numberOfCleanRooms = function(room) {

};
```

TypeScript

```typescript
function numberOfCleanRooms(room: number[][]): number {

};
```

C++

```cpp
class Solution {
public:
```

```cpp
    int numberOfCleanRooms(vector<vector<int>>& room) {

    }
};
```

C#

```csharp
public class Solution {
    public int NumberOfCleanRooms(int[][] room) {

    }
}
```

Kotlin

```kotlin
class Solution {
    fun numberOfCleanRooms(room: Array<IntArray>): Int {

    }
}
```

Go

```go
func numberOfCleanRooms(room [][]int) int {

}
```
